

# BSI Technical Conference 2010

## “Wrestling with Greenhouse Gases to Win Sustainability”

Greenhouse gases (GHG) have been widely recognized as the key contributors to global warming making drastic climate change in the last decade. The change in climate has been directly or indirectly affecting us environmentally, socially and economically. The entire eco-system is now continuously being challenged by human acts and natural disasters and soon it might hit the tipping point that things could not be resumed as before. Developing without harming the environment is almost unrealistic. Striving the balance is however the key for achieving sustainability as the ultimate goal to all of us.
